

ACTIVITY 1 — FACILITATOR GUIDE**PMP Exam Orientation and Study Plan**

TYPE	DURATION	MAPS TO	TOPIC
Workshop	60 minutes	LO1	1 - Business Environment

Purpose of this activity

By the end of this activity learners will be able to reproduce the PMP Examination Content Outline (July 2026) blueprint from memory: question counts, timing and domain weights.

What learners produce

exam blueprint, study plan, pdu log — submitted to artifacts/.

Materials required

- Learner Worksheet (one per learner)
- Checklist (one per group)
- The course slides for the framework and worked example

Set-up

Groups of 3 to 4. Distribute one worksheet per learner and one checklist per group; each group needs one laptop for the calculations.

Scenario / briefing material

Contoso Learning Pte Ltd is a training provider with 14,000 active learners. Its course registration portal is 9 years old. Registration takes a median of 11 minutes and 34% of attempts are abandoned. Learner communications consume 24 staff-hours per week across 3 administrators. 62% of learner traffic is mobile, against a portal that is not responsive. Legacy consent screens do not meet current PDPA requirements. The project modernises course registration and learner communications.

How to run it — step by step

#	Instruction to learners	Facilitator note
1	Build the exam blueprint from the ECO 2026 numbers. Create artifacts/01-exam-blueprint.md and complete this table. The totals are given; derive the per-domain question counts yourself.	Circulate and ask each group to justify one entry against the case study facts.
2	Log the six question types. The July 2026 ECO added graphic-based items. List all six types and, for each, write one sentence on how you will approach it under time pressure.	Insist on individual listing before pooling, or the loudest voice sets the whole list.
3	Record your 35 contact-hour evidence. PMI requires 35 contact hours of project management education. This course supplies all 35 in one record. Create artifacts/01-pdu-log.md:	Have one group present a single row rather than the whole artifact — depth over coverage.
4	Build a 6-week study plan weighted to the blueprint. Study time should follow exam weight, not personal	Keep role-holders in role; learners drift to consensus. Push for the concern behind the

	comfort. Since Process is 41% of the exam, it gets the most hours.	stated position.
5	Write your answer-selection heuristics. Most PMP questions are situational and several options are defensible. What separates the keyed answer is usually a mindset, not a fact. Write these into your notes and apply them in every scenario question from Lab 02 onward.	Insist on individual listing before pooling, or the loudest voice sets the whole list.
6	Apply the heuristics to three scenarios. Answer each in writing. State your choice, then name which heuristic decided it.	Ask what the number would have to be before the decision flips. That is the exam's favourite question.
7	Set your baseline score. Answer 20 practice questions of any source, timed at 80 seconds each, and record the result:	Have one group present a single row rather than the whole artifact — depth over coverage.

Suggested timing

Minutes	Phase
6 min	Brief the scenario, confirm the inputs and assign roles
22 min	Work the first half of the steps individually, then pool as a group
23 min	Complete the remaining steps and finalise the deliverable
9 min	Group share-back, facilitator debrief and exam-style linkage

Total: 60 minutes

Discussion & decision prompts

1. Reproduce the PMP Examination Content Outline (July 2026) blueprint from memory: question counts, timing and domain weights — how did your group decide, and what would change that decision?
2. Convert the domain weights into a realistic question-count target per domain — how did your group decide, and what would change that decision?
3. Build a personal 6-week study plan anchored on the 35 contact hours earned in this course — how did your group decide, and what would change that decision?
4. Your per-domain question counts are 56 / 70 / 44 and sum to exactly 170 — can every member of your group defend it?
5. Where would pmp exam orientation and study plan have saved you time or money on a real project you have worked on?

What good looks like

- Your per-domain question counts are 56 / 70 / 44 and sum to exactly 170.
- Your pacing figure is 80 seconds per question, derived from 240 minutes / 180 questions.
- Your study plan gives Process the largest hour allocation of any single domain.
- Your study plan contains at least two full-length timed mocks in the final week.
- For each scenario you named a heuristic, not just a letter. If you only wrote "C", redo it.
- Your PDU log names the provider, the course reference C523, and 35 contact hours.
- You recorded a numeric baseline score you can compare against in Lab 24.
