Date	

Self-check — PESTLE and TECOP External Environment Scan

Tick each item you have completed. Any blank is a gap to close before your group presents at the debrief.

#	Criterion	Evidences	✓
1	Every PESTLE letter (P, E, S, T, L, E) has at least one factor; a scan missing a category is not a PESTLE scan.	LO4	
2	Every score is the product of impact and likelihood, and you can state both numbers for any factor.	LO4	
3	Your TECOP table surfaced at least one factor that does not appear anywhere in your PESTLE table. If the two tables are identical, you used PESTLE twice.	LO4	
4	Every factor scoring 16+ has a named destination artifact in a later lab - not a vague "monitor".	LO4	
5	Your cadence names an owner, a frequency, and at least three out-of-cycle triggers.	LO4	
6	In Scenario 1 you chose B and can explain why "add to risk register and continue" is wrong for an event that has already happened.	LO4	

Debrief check

Every PESTLE letter (P, E, S, T, L, E) has at least one factor; a scan missing a category is not a PESTLE scan.
