

ACTIVITY 3 — LEARNER WORKSHEET**EEF/OPA Inventory, Governance and Escalation Thresholds**

TYPE	DURATION	MAPS TO	TOPIC
Workshop	75 minutes	LO5	1 - Business Environment

What you are doing

Contoso Learning Pte Ltd is a training provider with 14,000 active learners. Its course registration portal is 9 years old. Registration takes a median of 11 minutes and 34% of attempts are abandoned. Learner communications consume 24 staff-hours per week across 3 administrators. 62% of learner traffic is mobile, against a portal that is not responsive. Legacy consent screens do not meet current PDPA requirements. The project modernises course registration and learner communications.

What you will produce: eef opa inventory, governance model, escalation thresholds — submitted to artifacts/.

What you need before you start

- Lab 02 PESTLE/TECOP scan and ranked factor list

Your steps

1. Inventory the Contoso EEFs. Create artifacts/03-eef-opa-inventory.md. Classify each item as internal or external, and state the constraint it imposes.
2. Inventory the Contoso OPAs. The key move: pull one **specific** item from OPA-03. From the lessons-learned repository, the prior portal project recorded:
3. Design the governance model. Create artifacts/03-governance-model.md. Governance answers four questions: who decides, on what, how often, and against what measure.
4. Define success metrics. ECO Business Env T1 explicitly includes "Define success metrics". Vague metrics are not governance. Each metric needs a baseline, a target, a measurement method and an owner.
5. Set numeric escalation thresholds. The ECO enabler is "Outline governance escalation paths and thresholds". A threshold without a number is not a threshold. Create artifacts/03-escalation-thresholds.md:
6. Separate the change path from the issue path. These are different processes and the exam tests whether you know which one applies.
7. Answer the exam-style scenarios

Your working space

Complete every field. Keep this worksheet — it is your reference for the rest of the course.

Step 1 — Inventory the Contoso EEFs**Step 2 — Inventory the Contoso OPAs**

Step 3 — Design the governance model

Step 4 — Define success metrics

Step 5 — Set numeric escalation thresholds

Step 6 — Separate the change path from the issue path

Step 7 — Answer the exam-style scenarios

Deliverable checklist

- 03-eef-opa-inventory.md - at least 12 EEFs and 10 OPAs, each classified and with its constraint or use stated.
- The specific lesson you extracted from the lessons-learned repository and where it changes your plan.
- 03-governance-model.md - decision bodies with membership, decision rights, cadence, and explicit "cannot decide" limits; plus the three stage gates with entry criteria.
- The success metrics table, every row with a baseline, target, method and owner.
- 03-escalation-thresholds.md - numeric thresholds for cost, schedule, change, risk, compliance and impediments.
- The completed change/issue/risk routing exercise.
- Written answers to the three scenarios.
