Self-check — Business Case and Cost-Benefit Analysis

Tick each item you have completed. Any blank is a gap to close before your group presents at the debrief.

#	Criterion	Evidences	✓
1	Every benefit line traces to a Lab 03 baseline metric. A benefit with no baseline cannot be proven in Lab 23.	LO1	
2	Your discount factors decrease with time and are below 1. If any factor exceeds 1, you have inverted the formula.	LO1	
3	Your NPV subtracts the initial investment. Forgetting the year-0 outflow is the single most common arithmetic error here.	LO1	
4	Your BCR is above 1 and equals total benefit divided by total cost - not the inverse.	LO1	
5	Your do-nothing option has a *negative* number attached, not a blank. Do-nothing is never free.	LO1	
6	Your recommendation cites NPV as the deciding measure, not payback or project size.	LO1	
7	Your downside scenario still shows a positive NPV, and you stated that conclusion explicitly.	LO1	
8	In Scenario 2 you named the SGD 180,000 as sunk before discussing what to do next.	LO1	

Debrief check

Every benefit line traces to a Lab 03 baseline metric. A benefit with no baseline cannot be proven in Lab 23.
