

ACTIVITY 9 — LEARNER WORKSHEET**Requirements Elicitation, Mind Mapping and the Traceability Matrix**

TYPE	DURATION	MAPS TO	TOPIC
Workshop	90 minutes	LO1	3 - Plan the Project

What you are doing

Contoso Learning Pte Ltd is a training provider with 14,000 active learners. Its course registration portal is 9 years old. Registration takes a median of 11 minutes and 34% of attempts are abandoned. Learner communications consume 24 staff-hours per week across 3 administrators. 62% of learner traffic is mobile, against a portal that is not responsive. Legacy consent screens do not meet current PDPA requirements. The project modernises course registration and learner communications.

What you will produce: requirements mindmap, requirements register, rtm — submitted to artifacts/.

What you need before you start

- Lab 06 charter high-level requirements R-1 to R-6 and scope boundaries
- Lab 07 stakeholder register
- Lab 04 compliance requirements C-01 to C-13

Your steps

1. Choose elicitation techniques deliberately. There is no single best technique. Each buys different information at a different cost, and the exam tests whether you can match technique to situation.
2. Build the requirements mind map in the live tool. Open the mind mapping tool: Mind Mapping
3. Write the requirements register. Create artifacts/09-requirements-register.md. Priority uses MoSCoW, which Lab 10 will formalise and challenge.
4. Set requirement attributes and versioning. A requirement is not just a sentence. Each one carries attributes that make it manageable. Record these for every requirement in the register.
5. Build the requirements traceability matrix. Create artifacts/09-rtm.md. The RTM is the single artifact that connects the business need at one end to the test evidence at the other. Build it as a table with a column for every link in that chain.
6. Understand what bidirectional traceability actually buys you. Compute the current compliance coverage from the matrix above and record it:
7. Answer the exam-style scenarios

Your working space

Complete every field. Keep this worksheet — it is your reference for the rest of the course.

Step 1 — Choose elicitation techniques deliberately**Step 2 — Build the requirements mind map in the live tool**

Step 3 — Write the requirements register

Step 4 — Set requirement attributes and versioning

Step 5 — Build the requirements traceability matrix

Step 6 — Understand what bidirectional traceability actually buys you

Step 7 — Answer the exam-style scenarios

Deliverable checklist

- 09-requirements-mindmap.md - the exported or screenshotted mind map with the central node, all eight branches and at least four sub-branch leaves each.
- 09-requirements-register.md - at least 22 numbered requirements spanning business, stakeholder, functional, non-functional, transition and quality categories, each with source, priority and a testable acceptance criterion.
- The requirement attribute set completed for at least five requirements, including status and version.
- 09-rtm.md - at least 12 populated rows tracing business need, charter requirement, requirement ID, WBS element, story, design artifact, test case and compliance requirement.
- The compliance coverage fraction computed from the RTM, with the uncovered C-nn named and the closing requirements drafted.
- The elicitation technique selection table with the technique chosen for each stakeholder group and the reason.
- Written answers to the three scenarios.
