

ACTIVITY 17 — LEARNER WORKSHEET

Conflict Resolution: Five Modes, Leas' Levels and Negotiation

TYPE	DURATION	MAPS TO	TOPIC
Role Play	90 minutes	LO3	4 - Lead the Project Team

What you are doing

Contoso Learning Pte Ltd is a training provider with 14,000 active learners. Its course registration portal is 9 years old. Registration takes a median of 11 minutes and 34% of attempts are abandoned. Learner communications consume 24 staff-hours per week across 3 administrators. 62% of learner traffic is mobile, against a portal that is not responsive. Legacy consent screens do not meet current PDPA requirements. The project modernises course registration and learner communications.

What you will produce: conflict log, roleplay notes, resolution plan — submitted to artifacts/.

What you need before you start

- Lab 08 ground rules and decision rules
- Lab 16 Tuckman diagnosis and motivation profiles
- Lab 07 stakeholder attitudes and salience classifications

Your steps

1. Build the conflict log. Create artifacts/17-conflict-log.md. Log conflict as you log risk: recording it is what stops it escalating unnoticed from L2 to L3.
2. Role-play 1: two developers on architecture (L1/L2). Create artifacts/17-roleplay-notes.md. Work in pairs. Read only your own role card. Ten minutes of role-play, five minutes of debrief.
3. Role-play 2: Head of Sales versus product owner on scope (L3)
4. Role-play 3: QA lead versus dev lead on the definition of done (L2/L3)
5. Role-play 4: admin staff versus Ops Manager on redundancy (escalating, high emotion)
6. Build the resolution plan. Create artifacts/17-resolution-plan.md. Every open conflict in the log gets a level, a target level, a mode, an action, an owner, a date and an escalation trigger.
7. Negotiation: positions, interests, BATNA and ZOPA. Worked example on the real Contoso negotiation, CF-06:
8. Answer the exam-style scenarios

Your working space

Complete every field. Keep this worksheet — it is your reference for the rest of the course.

Step 1 — Build the conflict log**Step 2 — Role-play 1: two developers on architecture (L1/L2)**

Step 3 — Role-play 2: Head of Sales versus product owner on scope (L3)

Step 4 — Role-play 3: QA lead versus dev lead on the definition of done (L2/L3)

Step 5 — Role-play 4: admin staff versus Ops Manager on redundancy (escalating, high emotion)

Step 6 — Build the resolution plan

Step 7 — Negotiation: positions, interests, BATNA and ZOPA

Step 8 — Answer the exam-style scenarios

Deliverable checklist

- 17-conflict-log.md - at least six logged conflicts with parties, issue, Leas level, source, mode used, intervention, outcome and status; and a written note identifying which of them are process or capacity defects presenting as interpersonal conflict.
- 17-roleplay-notes.md - completed observer checklists for all four role-plays; for each, the Leas level you diagnosed with the exact words that told you, the modes each party used, and written answers to every debrief question. For role-play 1 you must name the option that serves both hidden interests and state whether it emerged.
- 17-resolution-plan.md - every open conflict with a current level, target level, chosen mode with justification, action, owner, date and a named escalation trigger.
- The five-mode table completed in your own words with a Contoso example and a "when it fails" for every mode - including a legitimate use for withdraw, accommodate and force.

- The CF-06 negotiation analysis: positions, interests for both sides, both BATNAs, both reservation points, the ZOPA with its numeric range, and the settlement - plus one further negotiation analysed the same way.
- Written answers to the three scenarios.
