Self-check — Root Cause Analysis with 5 Whys, Fishbone and Pareto

Tick each item you have completed. Any blank is a gap to close before your group presents at the debrief.

#	Criterion	Evidences	✓
1	Your cumulative percentages reach exactly 100% and your 80% cut falls at rank 5 with 81.55%.	LO3	
2	You ran the Pareto twice, on frequency and on cost, and you identified that acceptance criteria and browser compatibility rank 1 and 2 on both.	LO3	
3	Every fishbone category has at least two causes. An empty category means you stopped thinking, not that the category is irrelevant.	LO3	
4	Your root cause is a system or process failure, not a named person's shortcoming. If your chain ends in someone being careless, go further.	LO3	
5	Your root cause passes the removal test, and you stated honestly which defects it does *not* explain rather than over-claiming.	LO3	
6	Your causal chain connects the root cause to the Lab 20 CPI decline, showing that EVM detected the symptom and RCA found the cause.	LO3	
7	Your action list distinguishes corrective from preventive, and contains at least one action that updates an organisational process asset so a future project inherits the lesson.	LO3	
8	You noticed that the failure of assumption A-07 implies the other assumptions need checking, and A-05 in particular gates go-live.	LO3	

Debrief check

Your cumulative percentages reach exactly 100% and your 80% cut falls at rank 5 with 81.55%.
